EDUCATION

Georgia Institute of Technology - College of Computing, Atlanta, Georgia

May 2027

Bachelor of Science in Computer Science, Concentrations: Intelligence, Media (Faculty Honors)

GPA: 3.73/4.00

- Coursework: Object Oriented Programming (OOP), Data Structures, Discrete Mathematics, Design & Analysis of Algorithms, Computer Architecture, Objects & Design, Database Systems, Artificial Intelligence, Machine Learning

TECHNICAL SKILLS

Programming Languages: Java, Python, C++, C, TypeScript, JavaScript, SQL, Bash

AI/ML Frameworks: PyTorch, TensorFlow, scikit-learn, Transformers, RAG, Pandas, NumPy

Cloud & Systems: Azure, GCP, AWS, Docker, Kubernetes, CI/CD, Distributed Systems, Linux/Unix, HPC

PROFESSIONAL EXPERIENCE

GlossGenius

Sep 2026 – Dec 2026

Software Engineering Intern

New York, NY

- Incoming Fall 2026 AI Agents Team: Working on AI agentic product features facing 100,000+ client businesses

Microsoft

May 2026 – Aug 2026

Software Engineering Intern

Redmond, WA

- Incoming Summer 2026: Core AI Platforms Team

Georgia Tech Research Institute (GTRI)

Jan 2025 – Present

Undergraduate Researcher

Atlanta, GA

- Designing a RAG pipeline on LLM-guided evolutionary PyTorch architecture search on CIFAR-10, using 2 FAISS vector indices with a cross-encoder reranker to retrieve prior experiments and documentation for faster NAS convergence
- Migrated the Python inference server to utilize vLLM's continuous batching and PagedAttention, accelerating throughput by 3.6x and achieving >95% KV cache utilization to serve Llama-3.3-70B models within 80GB VRAM limits
- Engineered a distributed fitness inheritance system with self-correcting LLM infrastructure on a SLURM cluster to reuse CNN checkpoints and autonomously resolve runtime errors, cutting 48+ redundant GPU evaluations per run

Todd Agriscience

Jun 2025 – Sep 2025

Software Engineering Intern

Los Angeles, CA

- Formulated a role-based authentication system with NextAuth.js middleware and an AWS DynamoDB session store, centralizing user identity and securing admin routes with sub-10ms latency for 20 client dashboards
- Integrated internationalization (i18n) into a Next.js 15/React 18 SaaS platform with middleware chaining to propagate locale context across authenticated redirects, resolving 4 production blockers to stabilize application routing

Acrotech Biopharma Inc.

Jun 2024 – Aug 2024

Software Engineering Intern

East Windsor, NJ

- Built a SharePoint intranet platform with SPFx, TypeScript, Webpack, and Gulp to centralize department resources behind role based permissions, driving 1,100+ cumulative employee visits within 3 months
- Developed JavaScript Power Automate workflow schedules that use CRUD operations to synchronize Excel and SharePoint databases, enforcing eventual consistency and reliable record updates across 9 departments

PROJECTS

CloudScribe AI | TypeScript, Next.js, Google Cloud Platform, Docker

Sep 2025 – Present

- Deploying a serverless media CD pipeline on GCP (Cloud Build, Cloud Storage, Pub/Sub, Firebase Functions) that uses Vertex AI generative models to transcribe and summarize user uploads designed to sustain 99.999% availability
- Containerized FFmpeg media processing with Docker on Cloud Run, implementing signed URL uploads secured by Firebase Auth, Cloud Logging and Monitoring dashboards with alerts, and Pub/Sub dead-letter topics for fault tolerance

Telegram Job Tracker | Python, GitHub Actions, GitHub Contents API, Telegram API

Aug 2025 – Sep 2025

- Shipped an automated monitoring service with GitHub Actions and TTL caching, delivering batched real-time Telegram alerts to 195+ active users, scaling reliably with under 1% failure and sub-15s latency across 7 CD pipelines

Spotify Playlist Optimizer | REST APIs, FastAPI, PostgreSQL, scikit-learn

Oct 2024 – Aug 2025

- Architected a FastAPI microservice with PostgreSQL and Spotify OAuth, batch processing playlist metadata with sub-200ms latency and integrating external APIs with fault-tolerant KNN data imputation for 95%+ feature coverage
- Implemented algorithmic clustering services (K-Means, DBSCAN) and PCA visualization on audio features, exposing tested CRUD endpoints and a Spotify Web API powered dashboard for playlist-scale analysis and organization
